8- QUEENS PROBLEM

AIM : To implement an 8-Queens problem using Python.

You are given an 8x8 board; find a way to place 8 queens such that no queen can attack any other

queen on the chessboard. A queen can only be attacked if it lies on the same row, same column,

or the same diagonal as any other queen. Print all the possible configurations.

To solve this problem, we will make use of the Backtracking algorithm. The backtracking algorithm, in general checks all possible configurations and test whether the required result is

obtained or not. For the given problem, we will explore all possible positions the queens can be

relatively placed at. The solution will be correct when the number of placed queens = 8.

CODE:

```
def print_board(board):
    for row in board:
        print(' '.join('Q' if cell else '.' for cell in row))
    print()

def is_safe(board, row, col, N):
    # Check this column
    for i in range(row):
        if board[i][col]:
            return False

    # Check upper left diagonal
    for i, j in zip(range(row, -1, -1), range(col, -1, -1)):
        if board[i][j]:
            return False

    # Check upper right diagonal
    for i, j in zip(range(row, -1, -1), range(col, N)):
        if board[i][j]:
            return False

    return True

def solve_nqueens_util(board, row, N):
    if row >= N:
        print_board(board)
        return True

    res = False
    for col in range(N):
        if is_safe(board, row, col, N):
            board[row][col] = True
            res = solve_nqueens_util(board, row + 1, N) or res
            board[row][col] = False

    return res

def solve_nqueens(N):
    board = [[False] * N for _ in range(N)]
    if not solve_nqueens_util(board, 0, N):
        print("Solution does not exist")
N=int(input("enter n: "))
solve_nqueens(N)
```

OUTPUT:

A screenshot of a Jupyter Notebook interface. The top bar shows the notebook name '220701017.jpynb' and a star icon. Below it is a menu bar with 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', and 'Help'. The main area contains a code cell with the following text: 'enter n: 4' followed by a loop that prints a grid of 'Q' characters. The output of the cell shows a 4x4 grid of 'Q' characters. The interface includes a left sidebar with icons for file explorer, search, and other tools. The top right corner has a 'Share' button and a 'Gemin' button.

```
enter n: 4
. Q . .
. . . Q
Q . . .
. . Q .

. . Q .
Q . . .
. . . Q
. Q . .
```
